**WIDE AREA**—The term is used to describe a large area of land, such as a state or a country, that is being studied or monitored. It is often used in the context of environmental science, where it refers to the study of large-scale environmental processes and patterns. For example, a wide area study might involve monitoring the distribution of a particular species across a large geographic region, or studying the impact of a major environmental event, such as a forest fire, on a large area of land.
